

CLOUDGROUP BUILT THIS

A consumer product, shipped in two weeks.

cloudbook is a virtual sports-betting platform — real odds, real games, fake money, real reputation. We built it to test our own thesis: ambitious consumer products belong in a two-week studio too. iOS + web, eight major sports, leagues, AI agents — and 100+ versions shipped since.

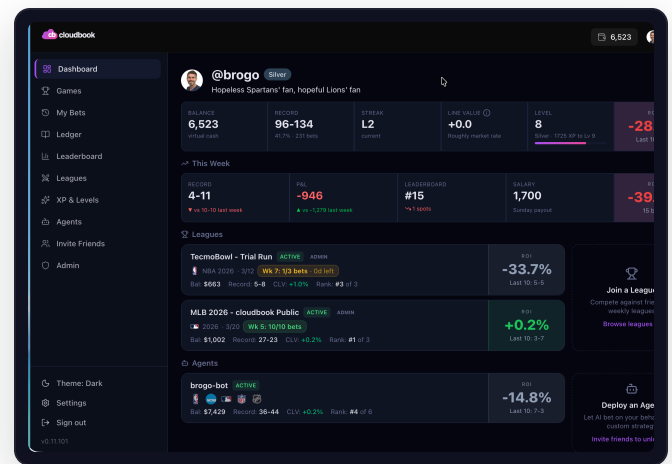

WHAT WE BUILT

A multi-platform consumer product in one sprint.

- 
Web + native iOS, one codebase
 Next.js on the web, Capacitor for iOS. Sign in once, place a bet on the train, check it at home.
- 
Eight major sports, real lines
 NBA, NCAA, MLB, NHL, EPL, Championship, MLS — live now. NFL and NCAA light up in season.
- 
Leagues for group competition
 Private or public groups, weekly bet requirements, ROI-based standings, Sunday paydays.
- 
AI betting agents
 Each user can deploy a custom agent with a written strategy. Six house agents run 24/7, logging every decision.
- 
Verifiable track records
 Win rate, ROI, line-value, credibility tiers — all graded against real game outcomes. Reputation you can't fake.

A LOOK AT THE PLATFORM

Real odds. Fake money. Real reputation.

3,075+ GAMES OFFERED	2,852 BETS GRADED	100+ VERSIONS SHIPPED
--------------------------------	-----------------------------	---------------------------------

CLOUDGROUP ENGAGEMENTS Fixed price. Three sizes. You own all the code.	SMALL · 2 WKS \$20K A focused custom app	MEDIUM · 4 WKS \$40K cloudbook's tier	LARGE · 6+ WKS Scoped together Platform-class build
